

Test 3 - June 15th, 2026

Material tested

- "Exploring History" pages: 107 Communist Manifesto; 166-171
- ON tabs: The Industrial Revolution: Social problems and solutions I to Imperialism II
- Language Challenges from last test March 23rd, 2026

Revision targets

1. You can show that Marxism holds that human society develops according to basic laws shaped by humans themselves;
Marxism says that human evolution occurs in periodical breakthroughs that progress the society very quickly.

It treats socialism as the next breakthrough that will occur by the revolution of the proletariat where the working class will seize control of everything.

He thinks that capitalism will lead to lower wages and poverty, this would drive the working class to rebel against the bourgeoisie and overthrow them, establishing a communist government.

Marx was a materialist, he believed that goods and ownership is the basis of all human interactions and progress.

Means of production Land, labour, factories, machines, tools, raw materials

Relations of production The power relationship between groups in the economy

Means of production change quickly, the relations take more time: Machines and factories made production faster, but workers still had little power and were exploited by factory owners. This contradiction created class struggle.

1. you know Marx's basic ideas and his analysis of capitalism and know what he wanted to preserve and what he wanted to change, and how this should be done;

Smith drafted a foundation of capitalism in the same year as the American independence.

He argues that capitalism is a consequence of natural human behaviour.

Wealth of a nation is the farm output and manufactured goods + the labour needed to produce them.

Encouraging the division of labour

Workers produce more when specialized.

The passage says that division of labor greatly increases production, which creates wider wealth in a well-run society, even benefiting poorer people.

It also argues that humans depend on others for many needs, but they usually get help not through kindness alone, but by appealing to others' self-interest. Trade works because each person offers something the other wants. For example, we get food from the butcher, brewer, and baker not because they are generous, but because selling to us benefits them too.

Marx was very impressed by the efficiency and the innovation that capitalism brought, but he still had some big issues regarding how the workers were treated.

Low wages lead to low consumption. If workers cannot buy enough, capitalists sell less. Businesses fail. Competition forces capitalists to lower wages further. Unemployment creates a reserve army of labour.

The first step was "class consciousness", the workers were supposed to realize that they were being treated unfairly and that they were being exploited, this was supposed to ignite a fight for change in them. He was confident that the workers would successfully overthrow the bourgeoisie and establish themselves as part of the production.

The means of production would in this way not be owned by the upper class anymore, it would be collectively owned and used as a means to benefit the society.

Marx's predictions did not all come true though, trade unions were established and the workers were able to obtain more rights and higher wages.

1. you can recount how Marx's ideas were applied in China after 1949, know how this application clashed with the theory and why it ended in disaster;

Mao Zedong after 1949 tried to implement communism in China, in agriculture, this meant collectivisation, peasants were organized into communes and all private equity was abolished.

Canteens were also established, the people were very well fed but a lot of food ended up wasted, people didn't own land anymore and personal responsibility was gone. Nobody put in as much effort into growing crops anymore. This overall started a big economic downfall and would prove how this system backfires.

To impress the central government, leaders of communes faked their results, potemkin fields were established, where crops were moved between fields to give the impression that there was a high yield.

Mao also gave priority to steel production, this left the farming to women and elderly, they just couldn't keep up.

The ruthless and authoritarian rise of communism to power triggered a very obeying reaction from the people, they were just focused on impressing the government even if it meant costing them human lives or faking the result. This shows that the revolution did not take people into account, it didn't treat them like humans, but rather just like gears in a mechanism. The system assumed complete solidarity with whatever was said and didn't account for the fact that some people just would not be able to keep up.

1. you can compare conflicting forecasts as to the influence of AI on jobs in the future and can assess how plausible each position is;

Some people say that AI will cause a big crash on the job market and take away a lot of people's jobs.

But AI could actually create a lot of new jobs and replace mundane tasks and thereby making workers more efficient and faster. Even though AI could take on some jobs, there will always be someone that needs to watch over the AI and make sure that everything operates correctly.
AI management, supervision, training, data.

The most used example for this matter is the industrial revolution, while mundane producing jobs were replaced by machines, a lot more jobs were created that used the produce or operated/designed said machinery.

Forecast 2: AI will destroy or reduce jobs.

The more pessimistic view says AI may take away many jobs, especially routine office jobs and entry-level jobs. It may also threaten "thinky jobs", meaning jobs involving writing, analysis, research, planning, coding, design, or communication.

A lot of companies are almost peer-pressured into using AI, as this attracts investors and makes the company look good and advanced.

1. you can put the Age of Imperialism into its historical context, know its various forms and the differences between Imperialism and Colonialism; you know how today's definition of racism is connected to the era of expansion overseas

Old Colonialism	New Imperialism
Control of shipping routes	Control of large territories
Coastal trading posts	Military occupation and administration
Slave trade and slave labour	Economic exploitation for industry
Trading companies and individuals	State governments and institutions
Overseas settlements	National prestige and global power

What they have in common:

- pursuit of capital gain
- establishment of overseas settlements (settler colonies)
- missionary activity
- civilising mission

The age of imperialism started about 1870, colonialism started even earlier, with christoph columbus in 1492§

European countries started to expand into africa, they took over countries and their local governments and imposed taxes as well as christianity
Not all bad, they introduced education and electricity as well as medicine

1. You are aware of the various backgrounds and motives of Europeans who played an active part in imperialist expansion; you have a working knowledge of the colonial subdivision of territories in Africa based on the map on p169 and can explain the forms of rule that colonial powers employed in colonial territories;
2. You are familiar with the views held in Europe about overseas indigenous populations, including notions of racial superiority, national and ethnic stereotypes, nationalism and jingoism, and how these affected the rule of Europeans over them; you know what the terms Social Darwinism and Social Imperialism mean;
3. you can correct terms and phrases using our language evaluation of the last test.

- control over shipping routes
- settlement of coastal towns as trading posts
- slave trade, slave labour
- actors: trading companies, individuals

- control over and military protection of large territories
- economic exploitation for industry at home
- improvement of society at home
- national greatness, prestige
- actors: state governments and institutions

Questions for this sequence

- (1) Explain why Marx is seen as a materialist philosopher and what this means.

He thinks that human interactions are based on needs and material relationships
Philosophy, spirituality are results of material situation
- (2) Note the main characteristics of today's capitalist markets as they are described in the sequence.

positive
Efficient
Can cover the need of millions
Provides paid work at increasing wages
- (3) Marx held that capitalists were "brilliant and doomed". Why?
- (4) What Marx predicted about the consequences of 19th-century capitalism did not come true – explain why.
Improved working conditions
Rising wages
- (5) Explain what the consequences of wage exploitation are based on the Lego figures sequence.
Low wage leads to low consumption - capitalists earn less
Many businesses fail
Capitalists who pay more need to give up - competition
Capitalist reserve army
- (6) Describe what has happened to wages since the 1970s in the Marxist perspective offered in the last part of the segment.
Trade unions had brought higher wages for workers
In the 80s, western governments were against trade unions, this leads to lower wages
Stagnation of wages

Pair work tasks

Task 1

First read p 100-101, "Living conditions...", then the texts below.

Compare their statements with the image below (p 105: «Das neue Verhältnis zwischen Arbeiter und Unternehmer»).

I - Adam Smith: The Wealth of Nations, 1776

Written in the same year as the American Declaration of Independence, Adam Smith's "The Wealth of Nations" is seen as the foundation of all thought about how a capitalist economy works. Smith argues that capitalism is the natural result of human activity in the economic sphere if producers, traders and consumers are left to follow their own self-interest.

Smith proposed that the wealth of a nation consisted of both farm output and manufactured goods along with the labour it took to produce them. To increase its wealth, Smith argued, a nation needed to expand its economic production. How could a nation do this? Smith thought the key was to encourage the division of labor.

He argued that workers could produce more if they specialized. He gave the example of a pin factory. One worker who did all the operations necessary to make a single pin, he said, could produce no more than 20 in one day. Ten workers could make 200 pins this way.

"The division of labour" leads to "a proportionable increase of the productive powers of labor. The separation of different trades and employments from one another seems to have taken place in consequence of this advantage. This separation, too, is generally called furthest in those countries which enjoy the highest degree of industry and improvement..."

It is the great multiplication of the productions of all the different arts, in consequence of the division of labor, which occasions, in a well-governed society, that universal opulence which extends itself to the lowest ranks of the people.

Man has almost constant occasion for the help of his brethren, and it is in vain for him to expect it from their benevolence only. He will be more likely to prevail if he can interest their self-love in his favor, and show them that it is for their own advantage to do for him what he requires of them... Give me that which I want, and you shall have this which you want, is the meaning of every such offer; and it is in this manner that we obtain from one another the far greater art of those good offices which we stand in need of. It is not from the benevolence of the butcher, the brewer, or the baker that we expect our dinner, but from their regard to their own interest."

<https://sourcebooks.fordham.edu/mod/adamsmith-summary.asp>

<https://www.crf-usa.org/bill-of-rights-in-action/bria-23-1-a-adam-smith-and-the-wealth-of-nations.html>

Smith drafted a foundation of capitalism in the same year of the American independence
He argues that capitalism is a consequence of natural human behaviour

Wealth of a nation is the farm output and manufactured goods + the labour needed to produce them
Encouraging the division of labour
Workers produce more when specialized

The passage says that **division of labor** greatly increases production, which creates wider wealth in a well-run society, even benefiting poorer people.
It also argues that humans depend on others for many needs, but they usually get help not through kindness alone, but by appealing to others' **self-interest**. Trade works because each person offers something the other wants. For example, we get food from the butcher, brewer, and baker not because they are generous, but because selling to us benefits them too

II - The Workers and the Industrial Revolution – an assessment

Phyllis Deane was an economist at Cambridge University

[...] Certain sectors of the labouring poor suffered a serious deterioration in their earning-power because they were made redundant by technical progress... [But in] effect, the sustained growth of national product to which industrialization gave rise [improved] working-class standards of living in three main ways...

(1) by creating **more regular employment opportunities** for all members of the family – this meant **high earnings per year** and per family even without a rise in wages per man-hour worked;

(2) by creating more opportunities for labour specialization and hence for the higher earnings that semi-skilled or skilled labour can command... and

(3) the upward pressure on the workers' standard of living also operated through the reductions in the prices of consumer goods and the widening of the range of commodities which come within the budget of the working classes.

Finally, of course, ... industrialization expanded the market for manufactured goods and so justified further increases in investment and output.

She's not a marxist and is more a capitalist, liberal free market economist

What prevented developments from proceeding according to Marx's prediction?

- Regular employment
- Access to goods and services
- Education and training

Overproduction???

50 variations of the exact same product in stores
So much competition

The fact that it works shows the variety of our market
Switzerland also profits with the variety

Task 2

First read "Exploring History", p 104-105.

Then find answers to the questions under the heading "2. Communism" on p 107 based on the texts on that page.

Marxism

Enlightenment theory of history

Marxism

Means of Production:
☞ land, labour, factories, knowledge used to produce goods

Relations of Production:
☞ power of one group over another in the economy

Marxism says that land labour and factories should have good means of production, that they exist to produce goods for the good of the people

It says that capitalism focuses way more of power and the fact that people try to gain advantage and misuse workers stalls progress

Question

How can workers turn the crises of capitalism into an advantage for themselves?

The Industrial Revolution: the challenges of AI

Podcast 1:

[Why AI Is A Massive Job-Creation Technology, Despite What You Think – JOSH BERSIN](#) (March 25, 2026)

Josh Bersin's statements in a nutshell:

He said that AI will create more opportunities and jobs as it will be needed to control and do tasks that the AI itself can't do

For example - taxi drivers will die

AI can be a tool to make their worker productive or actually replace them"

Podcast 2:

[Is AI about to steal your job? – podcast | AI \(artificial intelligence\) | The Guardian](#)

Questions

Will AI create more jobs?

No, it will take away

What are the special challenges facing entry-level jobs?

What about "thinky jobs"?

-podcast hosters

In what way is AI industry self-serving?

Are governments ready for the great changes about to come?

How to survive as an individual employee?

Imperialism - I

New Imperialism and the Scramble for Africa, p166-9

In 1914, Colonies accounted for 68 per cent of the world's area and 60 per cent of its population:

Colonies / settler colonies?
(a.k.a. "coloured" / "white"
colonies)

Lord Lugard justifies Imperialism and Indirect Rule (1893)
Frederick D. Lugard (1858-1945) played a major role in opening Africa to European colonialism. Born to missionary parents in Madras, India, he served as an army officer in Afghanistan, Sudan, and Burma and later as an official of the British East Africa Company.
[...] It is in order to foster the growth of the trade of this country, and to find an outlet for our manufactures and our surplus energy, that our far-seeing statesmen and our commercial men advocate colonial expansion...
If our rule in Africa introduces civilisation, peace, and good government, abolishes the slave-trade, and holds other advantages for Africa, it must not be therefore supposed that this was our only aim in going there. However important these objectives may be for a large and powerful section of the nation, I do not believe that in these days our national policy is based on motives of philanthropy only. Though these may be our duties, it is quite possible that here (as frequently if not generally is the case) advantage may run parallel with duty. There are some who say we have no right in Africa at all, that "it belongs to the natives." I hold that we must provide for our ever-growing population – either by opening new fields for emigration, or by providing work and employment overseas – and to stimulate trade by finding new markets, since we know what misery trade depression brings at home. While thus serving our own interests as a nation, we may, by selecting men of the right character for the control of new territories, bring at the same time many advantages to Africa. Nor do we deprive the natives of their birthright of freedom, to place them under a foreign yoke. It has always been the aim of British colonial method to rule through and by the native, and it is this method... which has been the secret of our success as a colonising nation, and has made us welcomed by tribes and peoples in Africa, who rose in revolt against other colonial powers... if there is any authority that we replace, it is the authority of the Slavers and Arabs, or the intolerable tyranny of the "dominant tribe."
from Jerry Bentley & Herbert Ziegler: Traditions & Encounters: A Global Perspective on the Past, 1500 to the Present: vol. 2, 2002 p 945.

Lugard's system of Indirect Rule

The „White Man's burden“

Take up the White Man's burden—
Send forth the best ye breed—
Go bind your sons to exile
To serve your captives' need;
To wait in heavy harness,
On fluttered folk and wild—
Your new-caught, sullen peoples,
Half-devil and half-child.

Take up the White Man's burden—
In patience to abide;
To veil the threat of terror
And check the show of pride;
By open speech and simple,
An hundred times made plain
To seek another's profit,
And work another's gain.

Take up the White Man's burden—

Take up the White Man's burden—
Have done with childish days—
The lightly proffered laurel,
The easy, ungrudged praise.
Comes now, to search your manhood
Through all the thankless years
Cold, edged with dear-bought wisdom,
The judgment of your peers.

EH 167, M3 to M5: Evaluate

1. What are the motives stated in each text?
2. Are there differences between those stated by British (M1 to M5) and German (M6) protagonists? If so, name them.
3. What role do these motives play in the cartoons below?

Imperialism, nationalism, Jingoism

Stereotypes

GB controls a large empire, but for how long?
Competitors want to take over

EH p170

Stereotypes about the nations

German cartoon

- Shows the german hardworking skills
Shows their discipline
Everything is regimented, (even in such a hot country there is a sign about snow)

Religious subtones - "read the bible and itll be fine)

Money is pressed out out of the native person

The whiskey - substances used to subdue the nation, went to the chiefs and not to the villagers usually

[White King Red Rubber Black Death](#)

21'45 to approx. 34'

1. What position did other European powers and their representatives have in the Congo after 1885? See also Leopold's decrees below.
2. Describe the methods of exploitation and Leopold's responsibility.

3. Leopold's reign over the Congo was founded on a "great contradiction" – explain this.

4. Describe the situation of the missionaries who witnessed the conditions in the Congo.

Some of Leopold's decrees after 1885 (1):

- all vacant lands throughout the Congo territory owned by the state
- nearly the whole of the Congo Free State to be treated as *terres domaniales*, which reduced land rights of the Congolese to native villages and farms
- *terres domaniales* sold as concessions to private companies
- merchants were to limit their commercial operations in rubber to bartering with the natives
- export duties on trade by non-S.A.B. merchants

Defending the record

Go to <https://www.memoiresducongo.be/en/> and assess the motives of the website's authors.

Go to the link entitled "Opinion" and read the text up until the paragraph ending with "with so little human and financial means!" Compare these statements with what you saw in the film.

The case of the German colonies in Africa

Using the statistics below, try to find out how truthfully the image at the bottom ("Deutschland – Deutsche Kolonien") represents reality.

Exports from German East Africa in mill. RM

	1894	1900	1906	1912
